Additional Controls- 2022  
Discussions for moving forward  
Set up facility call

EPA Region 8 has been directed to conduct outreach to stakeholders at high risk facilities to better understand risk, emissions, and community concern. Terumo BCT has been flagged as having a large cancer risk due to fugitive emissions. The Agency is conducting this outreach 1) educate and inform impacted communities about the risks from these facilities and 2) increase participation from impacted community members in the rule making process for the current National Emission Standards for Hazardous Air Pollutants (NESHAP) for Commercial Ethylene Oxide Sterilization and Fumigation Operations. The first phase of this process is to share data with states to confirm emissions numbers and risk calculations. I will add some attachments to this meeting shortly and let you know they're available.

Please let me know if this day or time doesn't work, we're hoping to hold this meeting this week if possible.

Thank you
